

## Homework 2, BIOL683, Due Thursday, 1/30 2:20PM

Based on the advice from Chapter 2 in Whitlock and Schluter, find a figure in a published paper **since 2017**. You need to find a figure for which you can obtain the associated data, either by inferring data points from the figure or by retrieving the data from an online database, such as dryad ([datadryad.org](http://datadryad.org)).

1. Provide the faulty figure and the reference describing where it came from.
2. Describe what is wrong with the figure in **1-2 sentences**.
3. Use the dataset associated with the figure to draw a new, better version in R.
4. Provide your new figure and the R code you used to draw it.
